FRONTEND DEVELOPER

Date: 22 Sep, 2026

Dear Hiring Manager,

I'm writing to apply for the Frontend Developer role. I bring 4.8 years of frontend engineering experience building performant, accessible, and reliable user-facing systems, and I'm drawn to the scope of this role: taking ambiguous specs and turning them into shipped, high-impact features that power a no-code app-building experience used across HR, IT, and Finance.

In my current role at Technogise, embedded with The Economist Group, I architected a responsive subscription interface in **Next.js** and **React**, building a scalable dark-theme system with data-theme attribute selectors that shipped with zero visual regression. I also improved **page load time by 46%** by eliminating redundant API calls and deferring non-critical data fetching, and I set up automated Husky-based code quality gates that measurably cut CI pipeline failures. On-call rotations have kept me close to production reliability, averaging under 5 minutes' first response time on incidents.

Before that, at Simpplr, an intranet SaaS platform, I led a web accessibility initiative that lifted axe-core scores by 10% and brought the product into WCAG 2.1 AA alignment, while also driving 90% test coverage and cutting code smells by 48%. Across both roles, I've worked at the intersection of UI craftsmanship, performance, and engineering standards — exactly the mix this role calls for, alongside comfort with autonomy in a fast-moving, cross-functional environment.

I'd welcome the chance to bring that same ownership and attention to performance and usability to the company. Thank you for considering my application — I'd love to discuss how my experience can contribute to your team.

Sincerely,
Rekha Kumari
